

Dublin Core Record for Montana Memory Project (MMP)

The record includes nineteen elements, each of which is repeatable. To assure success in a collaborative environment where consistent description of digital resources is critical for interoperability, the MMP Metadata Working Group has designated **the following twelve mandatory elements:**

1. Title

The name given to the resource by the creator or publisher; may also be an identifying phrase or name of the object supplied by the contributing institution.

Examples:

Title="Progressive Men of Montana"

Title="The Sun Also Rises"

Title="The Corrections"

Maps to Dublin Core **Title** - <http://dublincore.org/documents/usageguide/elements.shtml>

2. Creator (if available)

A person or entity primarily responsible for creating the intellectual content of the resource. Examples of creators include authors of written documents, artists, photographers, collectors of natural specimens or artifacts, organizations that generate archival collections, etc.

Examples:

Creator="Shakespeare, William"

Creator="Bridger Canyon Planning and Zoning Commission"

Creator="Internal Revenue Service. Customer Complaints Unit"

Maps to Dublin Core **Creator** - <http://dublincore.org/documents/usageguide/elements.shtml>

3. Subject

What the content of the resource is about or what it is, expressed by headings, keywords, phrases, names, or other terms for significant people, places, and events, etc. A classification code also may be assigned. Recommended best practice is to select a value from a controlled vocabulary or formal classification scheme. *****Use Library of Congress Subject Headings (LCSH) for controlled vocabulary available in ContentDM Acquisition Station**

Examples:

Subject="Montana--History"

Subject="Dogs"

Subject="Olympic skiing"

Maps to Dublin Core **Subject** - <http://dublincore.org/documents/usageguide/elements.shtml>

4. **Description**

An account of the content of the resource. Description may include but is not limited to: an abstract, a table of contents, reference to a graphical representation of content, or a free-text account of the content.

Examples:

Description="Illustrated guide to airport markings and lighting signals, with particular reference to SMGCS (Surface Movement Guidance and Control System) for airports with low visibility conditions."

Maps to Dublin Core **Description** - <http://dublincore.org/documents/usageguide/elements.shtml>

5. **Publisher**

An entity that made the resource available. For digital objects, Publisher is the entity that created the digital resource. Publishers can be a corporate body, publishing house, museum, historical society, university, project, repository, etc.

Examples:

Publisher="University of South Where"

Publisher="Amazon.com, Inc."

Publisher="Carmen Miranda"

Maps to Dublin Core **Publisher** - <http://dublincore.org/documents/usageguide/elements.shtml>

6. **Date Original** (if applicable)

Date of creation of the resource. Creation or modification dates for the original resource from which the digital object was derived or created.

Examples:

Date="1998-02-16"

Date="1998-02"

Date="1998"

Maps to Dublin Core **Date** - <http://dublincore.org/documents/usageguide/elements.shtml>

7. Date Digital

Date of creation or availability of the digital resource. The contributing institution may approximate the date a resource was digitized.

Examples:

Date="1998-02-16"

Date="1998-02"

Date="1998"

Maps to Dublin Core *Date* - <http://dublincore.org/documents/usageguide/elements.shtml>

8. Type

The nature or genre of the content of the resource. Type includes terms describing general categories, functions, genres, or aggregation levels for content. Recommended best practice is to select a value from a controlled vocabulary (for example, the DCMI Type Vocabulary [DCMITYPE]).

Examples (Using DCMI type vocabulary below):

Type="Image"

Type="Sound"

Type="Text"

***Use DCMI Type Vocabulary:

Collection - Group of things, could be a mixture of these examples

Dataset - Statistical data file, CD-ROM of data, database

Event - Gallery opening, symposium, parade

Image - Map, stereograph, photograph, painting, engraving

Still Image - photograph, painting, drawing, graphic design, plan, and map

Moving Image - animation, movie, television program, video

Interactive Resource - video game, virtual exhibit

Service - System that provides function for the end user, such as e-commerce order fulfillment

Software - Application software such as presentation viewer, word processor

Sound - Sound recording

Text - Scrapbook, diary, poem, home page, manuscript, music score; Note that page images are text

Physical Object - Museum piece, architectural structure, monument

Maps to Dublin Core *Type* - <http://dublincore.org/documents/usageguide/elements.shtml>

9. Format

The physical or digital manifestation of the resource. Typically, *Format* may include the media type or the dimensions of the resource. *Format* may be used to describe the software, hardware, or other equipment needed to display or operate the resource. Examples of dimensions include size and duration. Recommended best practice is to select a value from a controlled vocabulary (for example, the list of Internet Media Types [MIME] defining computer media formats).

Examples:

Format="image/gif"

Format="4 kB"

Format="image/jpeg"

Format="40 x 512 pixels"

Other popular MIME types: "application/pdf" OR "audio/mp3" OR "text/html"

Maps to Dublin Core *Format* - <http://dublincore.org/documents/usageguide/elements.shtml>

10. Resource Identifier

An unambiguous reference to the resource within a given context. A character string or record number that clearly and uniquely identifies a digital object or resource. The *Identifier* element ensures that individual digital objects can be accessed, managed, stored, recalled, and used reliably. Input the ISSN, ISBN, other international standard numbers, and local naming conventions that describe the original in *Source*.

Create resource identifier by adding institution code (in lowercase) followed by seven digits which auto-increment

Here are some Montana Memory Project examples:

University of Montana, Mansfield Library = mtg0000001, mtg0000002, ... mtg0000010 ...

Museum of the Rockies = mtmor0000001, mtmor0000002, ... mtmor0000010 ...

Parmly Billings Library = uja0000001, uja0000002, ... uja0000010 ...

*****See Appendix 1 for Unique Institution Codes**

Examples:

Identifier="http://digcoll.mt.org/mzf0000001"

Identifier="ISBN:0385424728"

Identifier="H-A-X 5690B" [publisher number]

Maps to Dublin Core *Identifier* - <http://dublincore.org/documents/usageguide/elements.shtml>

11. Rights Management

Information about rights held in and over the resource. Typically, a *Rights Management* element will contain a rights management statement for the resource, or reference a service providing such information. Rights information often encompasses intellectual property rights (IPR), copyright, and various property rights.

Examples:

Rights="Access limited to Montana Memory Project members"

Rights="http://cs-tr.cs.cornell.edu/Dienst/Repository/2.0/Terms/;

Maps to Dublin Core **Rights** - <http://dublincore.org/documents/usageguide/elements.shtml>

12. Contributing Institution

A consistent reference to the institutions or administrative units that contributed to the creation, management, description, and/or dissemination of the digital resource. For example, one institution may physically hold the original resource, another may perform the digital imaging, and another may create metadata.

Examples:

Contributing Institution="University of Montana"

Contributing Institution ="Museum of the Rockies"

Contributing Institution ="Parmly Billings Library"

Maps to Dublin Core **Publisher** - <http://dublincore.org/documents/usageguide/elements.shtml>

The remaining seven elements are optional, but recommended. Richer, more complete records increase the likelihood that users will locate the desired digital resource.

13. Contributor

An entity responsible for making contributions to the content of the resource. The person(s) or organization(s) who made significant intellectual contributions to the resource but whose contribution is secondary to any person(s) or organization(s) already specified in a Creator element. Examples: editor, transcriber, illustrator, etc.

Examples:

Contributor="Shakespeare, William"

Contributor="Bridger Canyon Planning and Zoning Commission"

Contributor="Internal Revenue Service. Customer Complaints Unit"

Maps to Dublin Core **Contributor** - <http://dublincore.org/documents/usageguide/elements.shtml>

14. Source

A reference to a resource from which the present resource is derived. When applicable, use the *Source* element to cite any other resource from which the digital resource was derived, either in whole or in part. Some digital resources are “born digital” and derive from no pre-existing resource; in these cases, the *Source* element is not used.

Examples:

Source="Image from page 54 of the 1922 edition of Romeo and Juliet"

Source="RC607.A26W574 1996" [where "RC607.A26W574 1996" is the call number of the print version of the resource, from which the present version was scanned]

Maps to Dublin Core *Source* - <http://dublincore.org/documents/usageguide/elements.shtml>

15. Language

Indicates the language(s) of the intellectual content of the resource. This implies the language(s) in which a text is written or the spoken language(s) of an audio or video resource. Visual images do not usually have a language unless there is significant text in a caption or in the image itself.

Examples:

Language="en"

Language="Primarily English, with some abstracts also in French."

Maps to Dublin Core *Language* - <http://dublincore.org/documents/usageguide/elements.shtml>

16. Relation

A reference to a related resource. The element contains information necessary to show a relationship with another resource. A relationship may be multidirectional (i.e., a record may reference one or more other related resources). There may also be a one-directional relationship, even though a refinement may exist to show reciprocity (e.g., the use of *Relation [Requires]* does not necessitate the use of *Relation [Is Required By]* in another record). The relationship may be one of intellectual content variation (*Is Version Of/Has Version*), part-to-whole (*Is Part Of/Has Part*), citation/reference (*References/Is Referenced By, Conforms To*), substitution (*Replaces/Is Replaced By*), format variation (*Has Format/Is Format Of*), or dependency (*Requires/Is Required By*).

Example:

Title="Acher, Charles"

Relation="Progressive Men of Montana"

[Resource is book, entry in book is "Acher, Charles"]

[Relationship described is IsPartOf.]

Maps to Dublin Core *Relation* - <http://dublincore.org/documents/usageguide/elements.shtml>

17. Coverage

Coverage describes the spatial or temporal characteristics of the intellectual content of the resource. Spatial refers to the location(s) covered by the intellectual content of the resource (i.e., place names, longitude and latitude, celestial sector, etc.) *not* the place of publication. Temporal coverage refers to the time period covered by the intellectual content of the resource (e.g., Jurassic, 1900-1920), *not* the publication date. For artifacts or art objects, the spatial characteristics usually refer to the place where the artifact/object originated while the temporal characteristics refer to the date or time period during which the artifact/object was made.

Examples:

Coverage="1995-1996"

Coverage="17th century"

Coverage="Gallatin Valley, Montana"

Maps to Dublin Core *Coverage* - <http://dublincore.org/documents/usageguide/elements.shtml>

18. Digitization Specifications

Use the *Digitization Specifications* element to record technical information about the digitization of the resource: the hardware, software, and processes used to create the digitized resource. Include such information as scanner model, scan resolution, color profiles, compression schemes, size of *master* file (sometimes referred to as archival file), etc. This element is primarily intended for use at the local level.

Examples:

Digitization Specifications="3,000,000 bytes file size for master file format"

Digitization Specifications="24 bits bit depth of master file format"

Digitization Specifications="Epson 1640XL Scanner hardware"

Digitization Specifications="PhotoshopCS Creation software"

Maps to Dublin Core *Description* - <http://dublincore.org/documents/usageguide/elements.shtml>

19. Provenance

A statement of any changes in ownership and custody of the resource since its creation that are significant for its authenticity, integrity and interpretation. The statement may include a description of any changes successive custodians made to the resource. It could also be used to identify and/or acknowledge donors, original owners, etc.

Examples:

Provenance="This copy once owned by Benjamin Spock."

Provenance="Estate of Hunter Thompson."

Provenance="Stolen in 1999; recovered by the Museum in 2003."

Maps to Dublin Core *Provenance* - <http://dublincore.org/documents/usageguide/elements.shtml>
